

HOW THE ROBOT WORKS TO GIVE YOU PERFECT LEVERAGE EVERY TIME :

The screenshot shows the following data:

Balance:	541.0 USD
Equity:	489.8 USD
Allocated:	538.0 USD
Add Capital:	49.3 USD
Lot size:	0.11
Profit %:	-9.47 %
Days Left:	Waiting 2 ticks

Annotations:

- Amount of capital already entered into the market** points to the **Allocated** value (538.0 USD).
- Days left until you need to download and install the updated robot** points to the **Days Left** value (Waiting 2 ticks).
- Minimum amount of capital needed to open another trade** points to the **Add Capital** value (49.3 USD).
- The robot will close trades, but you can close trades manually by clicking "Close all"** points to the **Close all** button.

✓ Balance:

Once the trade closes in a profit. That profit will be added to your balance

✓ Equity:

How much your balance would be if you closed the trade at that specific time

✓ Allocated:

How much of your balance has been allocated to the trade

The screenshot shows the same data as above, but with the **Allocated** value (0.0 USD) highlighted by a green arrow.

If you have trades open prior to uploading the new updated robot, and your allocated says "0.0 USD"

It will open a trade and allocate the whole balance again. If this happens close the new trade it opened and your allocated amount will readjust and update with the correct allocated amount.

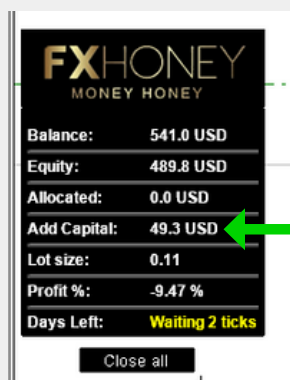

It will then only allocate the correct amount instead of the whole balance.

✓ Add capital:

How much capital to add for the robot to open another trade

✓ Lot size:

For every “add capital” amount, your robot should be taking a lot size of 0.01
For example:

FXHONEY MONEY HONEY	
Balance:	541.0 USD
Equity:	489.8 USD
Allocated:	0.0 USD
Add Capital:	49.3 USD
Lot size:	0.11
Profit %:	-9.47 %
Days Left:	Waiting 2 ticks

Close all

For every 49\$ you have in your account it should take a 0.01 lot size.

Therefore if you have 100\$ it will take 0.02 lot size because 49\$ goes into 100\$ twice.

This example has 541\$ therefore its using a 0.11 lot size

✓ Profit percentage:

How much profit percentage your trade is on at that specific time .

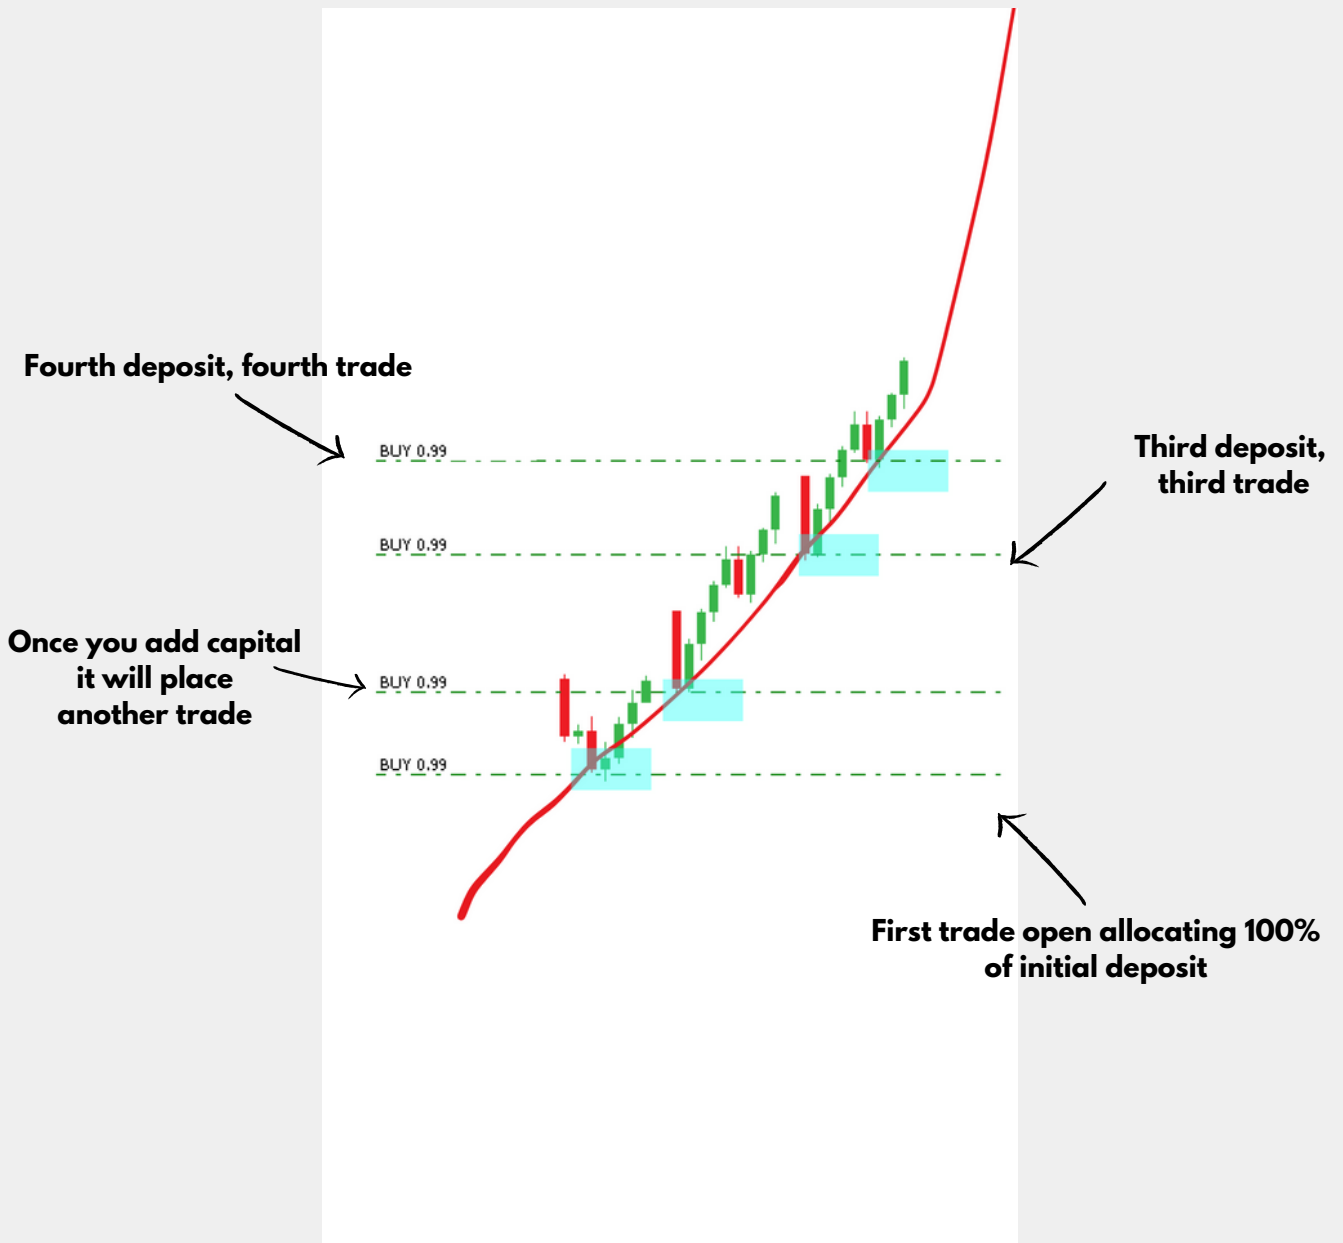

✓ Days left:

How many days until you need to download and install the updated robot.
If it says “waiting few ticks” or “waiting 2 ticks” this means its waiting for movement in the market. This usually occurs over weekends and US holidays when markets are closed.

✓ Close all:

If you would like to close your trades manually before it reaches the profit percentage set, you can click the close all button to manually close all your trades.

How the robot works

Input Settings

You can leave all the settings as is unless instructed otherwise
